Project Name: Visualization Tool for Electric Vehicle Charge and Range Analysis Maximum

Marks :2 Marks

S.No.	Parameter	Description
1	Problem Statement	The rapid growth of electric vehicles has generated large amounts of data related to pricing, battery capacity, range, and charging infrastructure. However, this data is not easily understandable for users, researchers, or decision-makers. There is a need for a system (Problem to be solved) that can analyze and visualize EV data effectively to provide meaningful insights.
2	/ Solution	The proposed solution is an Electric Cars Analytics Dashboard developed using Tableau. The system collects EV data from Excel/CSV sources, processes it using Tableau, and creates interactive dashboards and stories. These visualizations are description published on Tableau Public and embedded into a responsive website built using HTML, CSS, and Bootstrap. Users can access and interact with the dashboard through the website.
3	Novelty / Uniqueness	Integration of Tableau dashboards with a web-based interface. Use of interactive storytelling for better understanding. Combination of data analytics and web development. Provides a user-friendly visualization for both technical and non-technical users. Helps users understand electric vehicle trends and performance.
4	Social Impact / Customer Satisfaction	Promotes environmental awareness by encouraging EV adoption. Supports researchers and policymakers with data-driven insights. Provides an interactive and user-friendly experience.
5	Business Model (Revenue)	Can be used as a subscription-based analytics platform. Can collaborate with automobile companies for market insights. Revenue can be generated through advertisements or premium analytics Model) features. Can be extended as a data analytics service.
6		The system can handle larger datasets by integrating with databases. Scalability of the It can be extended to include real-time data. It can be scaled to

Solution

analyze other types of vehicles. The website can be deployed on cloud platforms for better scalability.
